$\square$ Lab safety $\rightarrow$ know the safety rules of our science classroom
$\square$ WHMIS $\rightarrow$ be familiar with the 3 components of WHMIS

Environment

Health
Hazard

Gas cylinder Compressed gas

Exploding bomb Exploding/reactive
$\square$ HHPS $\rightarrow$ recognize the 4 household hazardous product symbols and the 3 shapes that can surround them

poisonous

Danger, flammable

Caution,
explosive

Danger, corrosiveClassifying Matter $\rightarrow$ define matter:

Periodic Table $\rightarrow$ be familiar with how the periodic table is organized (i.e. atomic \#'s, periods, groups) and locate various groups (i.e. metals, non-metals, metalloids; main group elements, transitional and inner transitional metals; \& the 4 families with names: Alkali, Alkaline Earth Metals, Halogens and Noble gases)

$\square$ Atoms over the years $\rightarrow$ explain the changing model of the atom and people involved in each from the billiard ball to raisin muffin, to nuclear and finally the planetary model

DALTON
Billiard ball model
(atoms bump into each
Other like billiard balls)

THOMPSON

- Raisin bun model electrons move around atom

RUTHERFORD

- Gold foil experiment

1. Atom mostly empty space
2. Nucleus is small, dense, and positive.

BOHR

- planetary
$e^{-}$move in shells
$\square$ Atoms \& their composition $\rightarrow$ understand how to determine the number of protons, electrons and neutrons in each element when neutral and when ions are formed

$$
\begin{array}{llll}
{ }_{20}^{40} C a & \mathrm{p}^{+}=20 \_ & e^{-}=20 \_ & \mathrm{n}^{\circ}=\_20 \\
{ }_{82}^{207} \mathrm{~Pb}^{+4} & \mathrm{p}^{+}=82 \_ & e^{-}=78 \_ & \mathrm{n}^{\circ}=125 \_ \\
{ }_{35}^{80} \mathrm{Br}^{-1} & \mathrm{p}^{+}=35 \_ & e^{-}=36 \_ & \mathrm{n}^{\circ}=\_45
\end{array}
$$

$\square$ How to draw atoms $\rightarrow$ be able to draw the Bohr-Rutherford and Lewis Dot Diagrams (aka: E.D.D) for the first 20 elements; also be familiar with the E.D.D for all main group elements

BRD for ${ }_{15}^{31} P$

## Lewis Electron-Dot Symbols for <br> Elements in Periods 2 \& 3

$\square$ Classitying compounds $\rightarrow$ understand how to classify

$$
\begin{array}{ll}
\mathrm{P}_{2} \mathrm{O}_{5}=\text { COVALENT } & \mathrm{NO}_{2}=\text { COVALENT } \\
\mathrm{MgCO}_{3}=\text { IONIC } & \mathrm{Ba}_{2} \mathrm{C}=\text { IONIC } \\
\mathrm{FeCl}_{2}=\text { IONIC } & \mathrm{ICl}=\text { COVALENT } \\
\mathrm{CO}=\text { COVALENT } & \left(\mathrm{NH}_{4}\right)_{3} \mathrm{PO}_{4}=\text { IONIC (polyatomic IONS!!) }
\end{array}
$$

Ionic compounds $\rightarrow$ know the properties of ionic compounds and be able to use E.D.D to show how they bond, the ions formed and the chemical formulas of each
Properties: CRYSTALLINE SOLIDS, HIGH MELTING POINTS, CONDUCT ELECTRICITY IN
WATER, HARD \& BRITTLE

$\square$ Covalent compounds $\rightarrow$ know the properties of covalent compounds and be able to use E.D.D and structural diagrams to show how they bond and the chemical formulas of each

Properties: (S), (L), (G), LOW MELTING POINTS, NON-CONDUCTORS,
Show how carbon and oxygen bond:

Nomenclature and Writing Chemical Formulas $\rightarrow$ be familiar with the rules in naming and writing chemical formulas for binary ionic and molecular compounds as well as those including polyatomics
$\mathrm{He}_{(\mathrm{g})}=$ HELIUM GAS
$\mathrm{GaCl}_{3}=$ GALIUM CHLORIDE
Tetracarbon octahydride $=\mathrm{C}_{4} \mathrm{H}_{8}$

$$
\begin{aligned}
& \mathrm{SO}_{3(\mathrm{~g})}=\text { SULPHUR TRIOXIDE } \\
& \mathrm{CoPO}_{4}=\mathrm{COBALT}(\text { III }) \mathrm{PHOSPHATE}
\end{aligned}
$$

$$
\text { nickel(III)chlorate }=\mathrm{Ni}\left(\mathrm{ClO}_{3}\right)_{3}
$$

$\square$ Chemical Reactions $\rightarrow$ recognize the different types of chemical equations (i.e. word and skeleton, and be able to go from one type to the other) and know the clues that indicate a chemical change (as opposed to a physical change) has occurred
$\square$ Balancing Equations $\rightarrow$ understand why equations must be balanced (The Law of Conservation of Mass) and know how to balance both skeleton and word equations
$\square$ Types of Reactions $\rightarrow$ be able to classify reactions as either synthesis, decomposition, single or double displacement and knowing this be able to predict the products formed, given the reactants; know how to use the activity series of metals or halogens for single displacement $r \times n s$

Write the balanced chemical equation with states and then indicate the type of reaction:

1. solid aluminum plus oxygen gas yields

$$
-4 \_\mathrm{Al}_{(\mathrm{s})}+\_3 \_\mathrm{O}_{2(\mathrm{~g})} \rightarrow \_2 \_\mathrm{Al}_{2} \mathrm{O}_{3}(\mathrm{~s})
$$

SYNTHESIS
2. tetracarbon decahydride gas plus oxygen gas yields

$$
\_^{2}-\mathrm{C}_{4} \mathrm{H}_{10(g)}+\_13 \_\mathrm{O}_{2(\mathrm{~g})} \rightarrow-8 \_\mathrm{CO}_{2(\mathrm{~g})}+\_10 \mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})}
$$

COMBUSTION
3. solid lithium plus aqueous gold(III)nitrate yields
_ $_{-} \mathrm{Li}_{(s)}+\ldots \mathrm{Au}\left(\mathrm{NO}_{3}\right)_{3(a q)} \rightarrow 3_{-} \mathrm{LiNO}_{3(q)}+\ldots \mathrm{Au}_{(s)}$
SINGLE DISPLACEMENT
4. aqueous phosphoric acid plus aqueous magnesium hydroxide yields

$$
\_2 \_\mathrm{H}_{3} \mathrm{PO}_{4(\mathrm{aq})}+\ldots 3 \_\mathrm{Mg}(\mathrm{OH})_{2(\mathrm{aq})} \rightarrow \_\_\mathrm{Mg}_{3}\left(\mathrm{PO}_{4}\right)_{2(\mathrm{aq})}+\ldots 6 \_\mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})} \text { DOUBLE DISPLACEMENT }
$$

5. solid ammonium chloride when heated produces gaseous nitrogen trihydride and aqueous hydrochloric acid
$\qquad$ $\mathrm{NH}_{4} \mathrm{Cl}_{(\mathrm{s})} \rightarrow \mathrm{NH}_{3(\mathrm{~g})}+$ $\qquad$ $\mathrm{HCl}_{(a q)}$

DECOMPOSITION
$\square$ Rates of Reactions $\rightarrow$ know the 4 factors that affect the rates of reactions and how they effect it; also be able to explain how catalysts can affect the rates of reactions and why they are used

4 factors: CONCENTRATION TEMPERATURE SURFACE AREA PRESSURE

## Catalysts: LOWER ACTIVATION ENERGY AND HELP ALIGN MOLECULES FOR MORE EFFECTIVE COLLISIONS

$\square$ Acids and Bases $\rightarrow$ be familiar with: the properties of acids and bases; the various indicators (red and blue litmus paper, pH paper, phenolphthalein, bromothymol blue and cabbage juice) we used to test and the results of each in determining whether a substance is an acid or base; the difference between concentration and strength of acids and bases what determines each

| PROPERTY | ACIDS | BASES |
| :---: | :---: | :---: |
| Litmus paper | BLUE TO RED | RED TO BLUE |
| phenolphthalein | STAYS CLEAR | TURNS PINK |
| Bromothymol Blue | TURNS YELLOW | STAYS BLUE |
| Conductivity | YES | YES |
| Taste | SOUR | BITTER |
| Feel | NONE | SLIPPERY |
| Reaction with carbonates | YES $=C O_{2(g)}$ | NO |

pH of a concentrated acid $=0-3$
pH of a concentrated base $=11-14$
pH of a 2 is $10000000 \times$ more concentrate than a pH of 9.
$\square$ Oxides $\rightarrow$ understand what an oxide is and how different types are used to make acids \& bases
$\qquad$ $\mathrm{Na}_{2} \mathrm{O}_{(\mathrm{s})}+$ $\qquad$ $\mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})} \rightarrow$ _2_ $\mathrm{NaOH}_{(\text {aq })}$
$\qquad$ $\mathrm{SO}_{3(\mathrm{~g})}{ }^{+}$ $\qquad$ $\mathrm{H}_{2} \mathrm{O}_{(1)} \rightarrow$ $\qquad$ $\mathrm{H}_{2} \mathrm{SO}_{4(\mathrm{aq})}$

Neutralization $\rightarrow$ write a balanced equation of hydrosulphuric acid reacting barium hydroxide
$\qquad$ $\mathrm{H}_{2} \mathrm{~S}_{(\mathrm{aq})}+$ $\qquad$ $\mathrm{Ba}(\mathrm{OH})_{2(\mathrm{aq})} \rightarrow$ $\qquad$ $\mathrm{BaS}_{(\mathrm{aq})}+$ _2 $^{2} \mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})}$
