1. What factors affect the rate of dissolving of a solid in a liquid?
2. Compare and contrast the Arrhenius and Bronsted-Lowry theories of acids and bases.
3. What is the molar concentration of the solution made by dissolving 1.00 g of solid sodium nitrate, $\mathrm{NaNO}_{3}$, in enough water to make 315 mL of solution?
4. What volume of $4.00 \times 10^{-2} \mathrm{~mol} / \mathrm{L}$ calcium nitrate solution, $\mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2(a 9)}$ will contain $5.0 \times 10^{-2} \mathrm{~mol}$ of nitrate ions?
5. By the addition of water, 80.0 mL of $4.00 \mathrm{~mol} / \mathrm{L}$ sulfuric acid, $\mathrm{H}_{2} \mathrm{SO}_{4}$, is diluted to 400.0 mL . What is the molar concentration of the sulfuric acid after dilution?
6. How many moles of NaOH are in 100.0 mL of $0.00100 \mathrm{~mol} / \mathrm{L} \mathrm{NaOH}$ solution?
7. What is the mass percent concentration of nicotine in the body of a 70 kg person smokes a pack of cigarettes ( 20 cigarettes) in one day? Assume that there is 1.0 mg of nicotine per cigarette, and that all the nicotine is absorbed into the person's body.
8. Human blood serum contains about $3.4 \mathrm{~g} / \mathrm{L}$ of sodium ions. What is the molar concentration of $\mathrm{Na}^{+}$in blood serum?
9. Name each of the following acids. Indicate whether each one is a strong or weak acid.
a) $\mathrm{H}_{2} \mathrm{SO}_{4(\mathrm{aq})}$
b) $\mathrm{HNO}_{3(\mathrm{aq})}$
c) $\mathrm{HBr}_{\text {(aq) }}$
d) $\mathrm{HCl}_{(\mathrm{aq})}$
e) $\mathrm{HF}_{\text {(aq) }}$
10. A sample of lemon juice was found to have a pH of 2.50 . What is the concentration of hydronium ions in the lemon juice?
11. How many milliliters of sodium hydroxide solution are required to neutralize 20 mL of $1.0 \mathrm{~mol} / \mathrm{L}$ acetic acid if 32 mL of the same sodium hydroxide solution neutralized 20 mL of $1.0 \mathrm{~mol} / \mathrm{L}$ hydrochloric acid?
12. What is the pH of a $1.0 \times 10^{-5} \mathrm{~mol} / \mathrm{L} \mathrm{Ca}(\mathrm{OH})_{2}$ (calcium hydroxide) solution?
13. What is the pH of a solution containing 2.5 g of NaOH dissolved in 100 mL of water?
14. For each of the following reactions, identify the acid, the base, the conjugate base, and the conjugate acid:
a) $\mathrm{HF}_{(\text {aq) }}+\mathrm{NH}_{3(a q)} \cdot \mathrm{NH}_{4(\text { aq) }}^{+}+\mathrm{F}_{(\text {aq) }}$
b) $\mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}{ }_{6}{ }^{3+}{ }_{(\mathrm{aq})}+\mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})} \cdot \mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{5}(\mathrm{OH})_{2}{ }^{+}{ }_{\text {(aq) })}+\mathrm{H}_{3} \mathrm{O}^{+}$
c) $\mathrm{NH}_{4}{ }_{(\text {aq) }}+\mathrm{CN}_{\text {(aq) }}$. $\mathrm{HCN}_{(\text {aq) }}+\mathrm{NH}_{3 \text { (aq) }}$
d) $\left(\mathrm{CH}_{3}\right)_{3} \mathrm{~N}_{\text {(aq) }}+\mathrm{H}_{2} \mathrm{O}_{\text {(l) }} \cdot\left(\mathrm{CH}_{3}\right)_{3} \mathrm{NH}_{\text {(aq) }}^{+}+\mathrm{OH}_{(\text {aq) }}$
15. A solution was prepared by mixing 70.0 mL of $4.00 \mathrm{~mol} / \mathrm{L} \mathrm{HCl}_{\text {(aq) }}$ and 30.0 mL of $8.00 \mathrm{~mol} / \mathrm{L} \mathrm{HNO}_{3(\mathrm{aq})}$. Water was then added until the final volume was 500 mL . Calculate $\left[\mathrm{H}^{+}\right]$and find the pH of the solution.

## Solutions \& Solubility Sample Questions

1. Calcium chloride, $\mathrm{CaCl}_{2}$, can be used instead of road salt to melt the ice on roads during the winter. To determine how much calcium chloride had been used on a nearby road, a student took a sample of slush to analyze. The sample had a mass of 23.47 g . When the solution was evaporated, the residue had a mass of 4.58 g . What was the mass/mass percent of $\mathrm{CaCl}_{2}$ in the slush ( $19.5 \%$ )
2. A fungus that grows on peanuts produces a deadly toxin. When ingested in large amounts, this toxin destroys the liver and can cause cancer. Any shipment of peanuts that contains more than 25 ppb of this dangerous fungus is rejected. A company receives 20000 kg of peanuts to make peanut butter. What is the maximum mass (in g ) of fungus that is allowed? ( 0.5 g )
3. A saline solution contains 0.90 g of NaCl dissolved in 100 ml of solution. What is the molar concentration of the solution? ( 0.15 M )
4. For a class experiment, Mr. Arthur must make 2.0 L of 0.10 M sulfuric acid. This acid is usually sold as an 18 $M$ concentrated solution. How much of the concentrated solution and how much water should be used to make a new solution with correct concentration? ( $0.011 \mathrm{~L}, 1.89 \mathrm{~L}$ )
5. A chemical reaction occurs when the following aqueous solutions are mixed: sodium sulfide and iron(II)sulfate. Identify the spectator ions. Then write the balanced net ionic equation.
6. Explain how, by using a single test, to identify a solution of an unknown concentration as being saturated, unsaturated, or supersaturated. In your answer make sure to fully explain the expected results of each possibility.
7. Mercury salts have a number of important uses in industry and in chemical analysis. Because mercury compounds are poisonous, however, the mercury ions must be removed from the wastewater. Suppose that 25.00 ml of 0.085 M aqueous sodium sulfide is added to 56.5 ml of 0.10 M mercury(II)nitrate. What mass of mercury(II)sulfide, $\mathrm{HgS}_{(s)}$ precipitates? ( 0.493 g )
8. Hydrogen cyanide is a poisonous gas at room temperature. When this gas dissolved in water, the following reaction occurs:

$$
\mathrm{HCN}_{(\mathrm{qq})}+\mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})} \Rightarrow \mathrm{H}_{3} \mathrm{O}_{(\mathrm{qq})}^{+}+\mathrm{CN}_{(\mathrm{aq})}
$$

Identify the conjugate acid-base pairs.
9. Calculate the pH of a solution with $\left[\mathrm{H}_{3} \mathrm{O}^{+}\right]=3.8 \times 10^{-3}(2.42)$
10. 13.84 ml of hydrochloric acid just neutralizes 25.00 ml of a 0.100 M solution of sodium hydroxide. What is the concentration of the hydrochloric acid? ( 0.1806 M )
